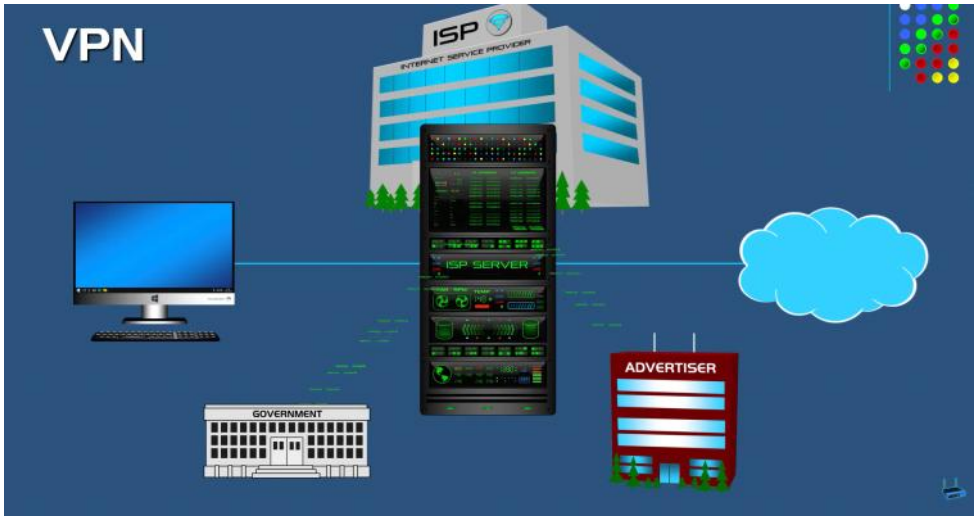
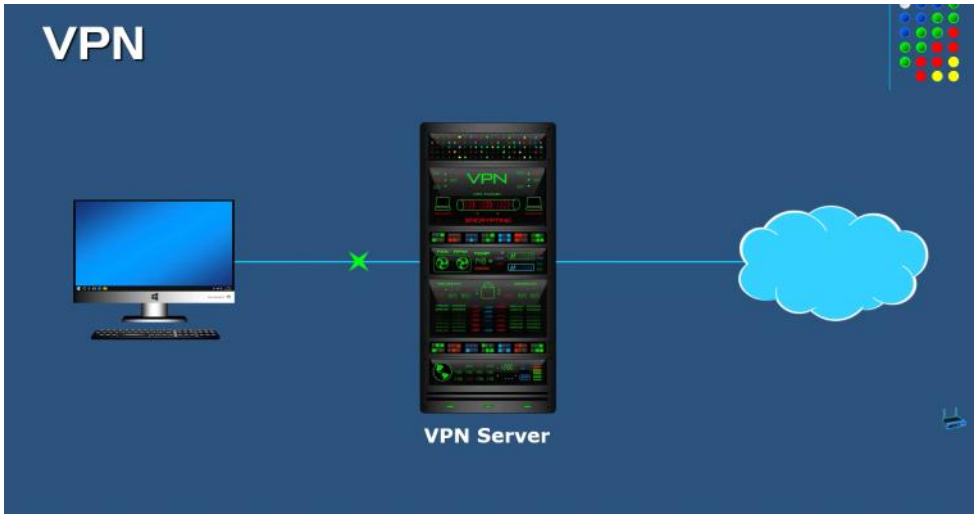
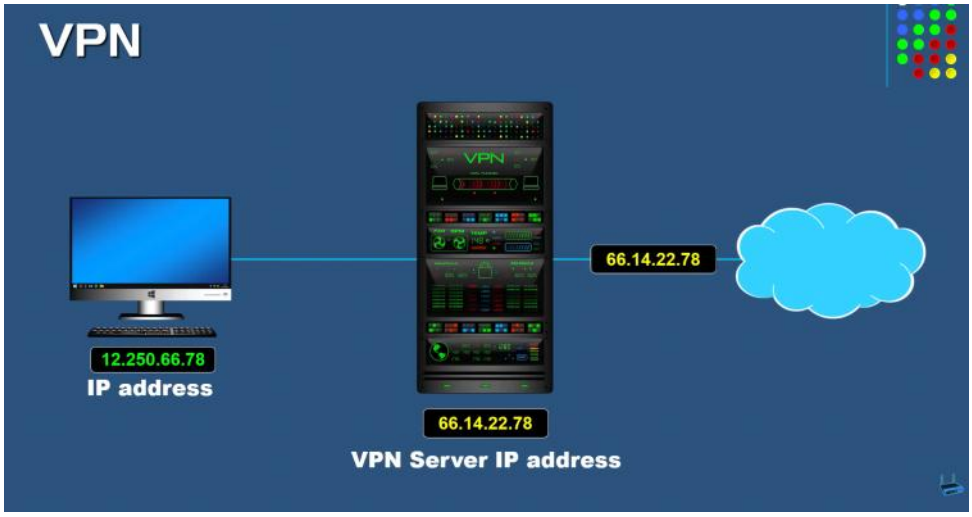
VPN

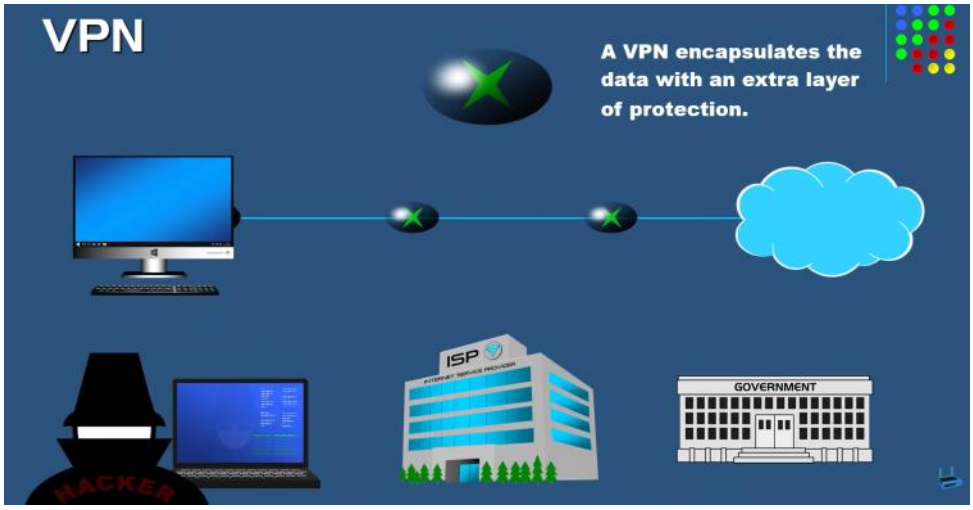
Friday, April 3, 2026 12:18 PM

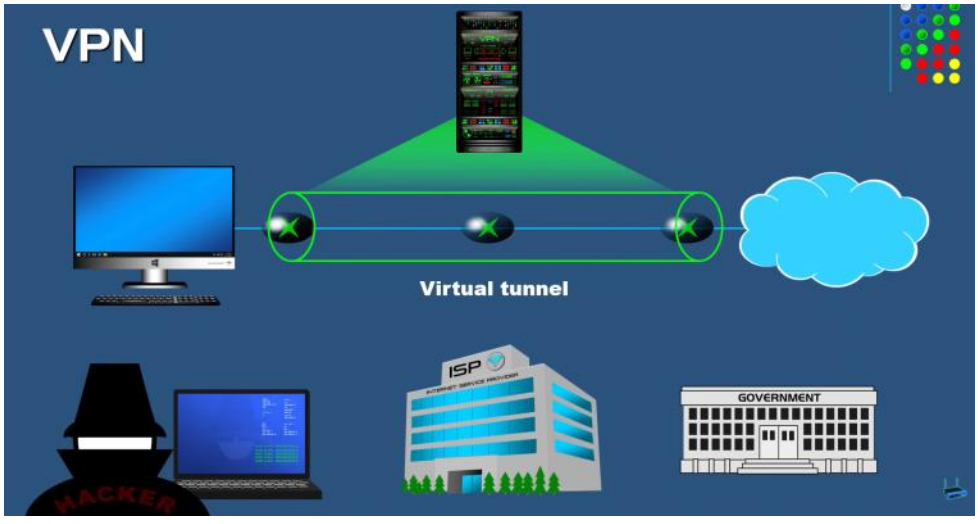
A VPN (Virtual Private Network) creates a secure connection over the internet by routing your traffic through a private serve r instead of your ISP. This hides your IP address, making your identity and location private.











It also encrypts your data, protecting it from hackers, especially on public Wi-Fi. VPNs can help you access content restricted by location and allow remote workers to securely connect to company networks. The encapsulation process is called tunneling keep it private for everyone

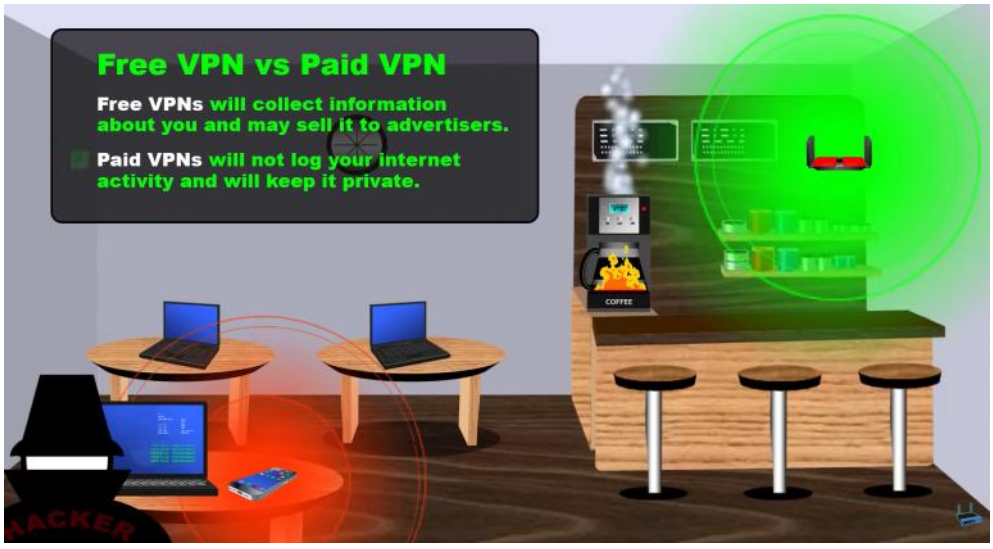
Who would need a VPN?
Anyone who wants to be extra safe on the internet.
• Safe
• Secure
• Anonymously



Free VPNs may track and sell your data, while paid VPNs usually offer better privacy and security.
